Contents of Volume 47, 2008

Number One (G321-0168)

Toward a conceptual foundation for service science: Contributions from service-dominant logic 5
R. F. Lusch, S. L. Vargo, and G. Wessels

Designing a service science discipline with discipline 15
R. J. Glushko

Service science: Catalyst for change in business school curricula 29
M. M. Davis and I. Berdrow

Service science: At the intersection of management, social, and engineering sciences 41
R. C. Larson

Complexity of service value networks: Conceptualization and empirical investigation 53
R. C. Basole and W. B. Rouse

Service system fundamentals: Work system, value chain, and life cycle 71
S. Alter

Estimating value in service systems: A case study of a repair service system 87
N. S. Caswell, C. Nikolaou, J. Sairamesh, M. Bitsaki, G. D. Koutras, and G. Iacovidis

BEAM: A framework for business ecosystem analysis and modeling 101
C. H. Tian, B. K. Ray, J. Lee, R. Cao, and W. Ding

Patterns of innovation in service industries 115
I. Miles

Business services as communication patterns: A work practice approach for analyzing service encounters 129
R. J. Clarke and A. G. Nilsson

Legal research topics in user-centric services 143
O. Pitkänen, P. Virtanen, and J. Kemppinen

Managed service paradox 153
N. Leon and A. Davies

Improving service delivery through integrated quality initiatives: A case study 167
J. Hickey and J. Siegel

Predicting customer choice in services using discrete choice analysis 179
R. Verma, G. R. Plaschka, B. Hanlon, A. Livingston, and K. Kalcher

Number Two (G321-0169)

Responsive systems: An introduction 197
R. F. Berry, P. E. McKenney, and F. N. Parr

Real-time Linux in real time 207
D. Hart, J. Stultz, and T. Ts'o

The read-copy-update mechanism for supporting real-time applications on shared-memory multiprocessor systems with Linux 221
D. Guniguntala, P. E. McKenney, J. Triplett, and J. Walpole

Toward scalable real-time messaging 237
D. Bauer, L. Garcés-Erice, S. Rooney, and P. Scotton

Generating real-time complex event-processing applications 251
Y. Magid, D. Oren, D. Botzer, A. Adi, B. Shulman, E. Rabinovich, and M. Barnea

Pulsar: A resource-control architecture for time-critical service-oriented applications 265
M. Astley, S. Bhola, M. J. Ward, K. Shagin, H. Paz, and G. Gershinsky

Harmony: Holistic messaging middleware for event-driven systems 281
P. Dube, N. Halim, K. Karenos, M. Kim, Z. Liu, S. Parthasarathy, D. Pendarakis, and H. Yang

DRIVE: A tool for developing, deploying, and managing distributed sensor and actuator applications 289
H. Chen, P. B. Chou, N. H. Cohen, S. S. Duri, and C. W. Jung

Accounting for platform effects in the design of real-time software using model-based methods 309
B. Selic

Event-processing network model and implementation 321
G. Sharon and O. Etzion

Patterns for real-world-aware and real-time solutions 335
F. N. Parr and L. Yusuf

Erratum 351

Number Three (G321-0170)

Creating and maintaining coherency in loosely coupled systems 357
R. High, Jr., G. Krishnan, and M. Sanchez

SOMA: A method for developing service-oriented solutions 377
A. Arsanjani, S. Ghosh, A. Allam, T. Abdollah, S. Ganapathy, and K. Holley

SOMA-ME: A platform for the model-driven design of SOA solutions 397
L.-J. Zhang, N. Zhou, Y.-M. Chee, A. Jalaldeen, K. Ponnalagu, R. R. Sindhgatta, A. Arsanjani, and F. Bernardini

Model-driven synthesis of SOA solutions 415
J. K. Strosnider, P. Nandi, S. Kumaran, S. Ghosh, and A. Arsanjani

The IBM telecommunications service delivery platform 433
S. Ramanathan, M. Alexander, and G. Kerr

A runtime-adaptive service bus design for telecom operations support systems 445
I.-Y. Chen, G.-K. Ni, and C.-Y. Lin

Business-process-driven gray-box SOA testing 457
Z. J. Li, H. F. Tan, H. H. Liu, J. Zhu, and N. M. Mitsumori

Increasing business flexibility and SOA adoption through effective SOA governance 473
R. Varadan, K. Channabasavaiah, S. Simpson, K. Holley, and A. Allam

Number Four (G321-0171)

Achieving continuous availability of IBM systems infrastructures 493
H. Morrill, M. Beard, and D. Clitherow

IBM Parallel Sysplex clustering: Technology options for continuous availability 505
C. Jews, R. Ahmad, and D. H. Surman

IBM Power Systems platform: Advancements in the state of the art in availability 519
G. T. McLaughlin, L. Y. Liu, D. J. DeGroff, and K. W. Fleck

Resilient hosting in a continuously available virtualized environment 535
R. R. Scadden, R. J. Bogdany, J. W. Clifford, H. D. Pearthree, and R. A. Locke

IT service management for high availability 549
R. Radhakrishnan, K. Mark, and B. Powell

Combining high availability and disaster recovery solutions for critical IT environments 563
D. Clitherow, M. Brookbanks, N. Clayton, and G. Spear

Three reliability engineering techniques and their application to evaluating the availability of IT systems: An introduction 577
D. Bailey, E. Frank-Schultz, P. Lindeque, and J. L. Temple III

Leveraging virtualization to optimize high-availability system configurations 591
S. Loveland, E. M. Dow, F. LeFevre, D. Beyer, and P. F. Chan

From high availability and disaster recovery to business continuity solutions 605
Th. Lumpp, J. Schneider, J. Holtz, M. Mueller, N. Lenz, A. Biazetti, and D. Petersen

Availability analysis of blade server systems 621
W. E. Smith, K. S. Trivedi, L. A. Tomek, and J. Ackaret

The resiliency challenge presented by soft failure incidents 641
J. M. Caffrey

Scoring and thresholding for availability 653
S. Heisig and J. R. M. Hosking

Enhancing availability with service automation and a trusted support partner 667
B. Haataia, S. Fredericksen, E. Burris, L. Bragg, K. W. Eastley, and J. Bird

IBM TotalStorage Productivity Center for Replication for z/OS 681
W. J. Rooney, G. E. McBride, and T. Hanif

Data center topologies for mission-critical business systems 695
R. Cocchiara, H. Davis, and D. Kinnaird

Errata 709

Note: Numbers in parentheses after issue numbers denote the issue order numbers.
